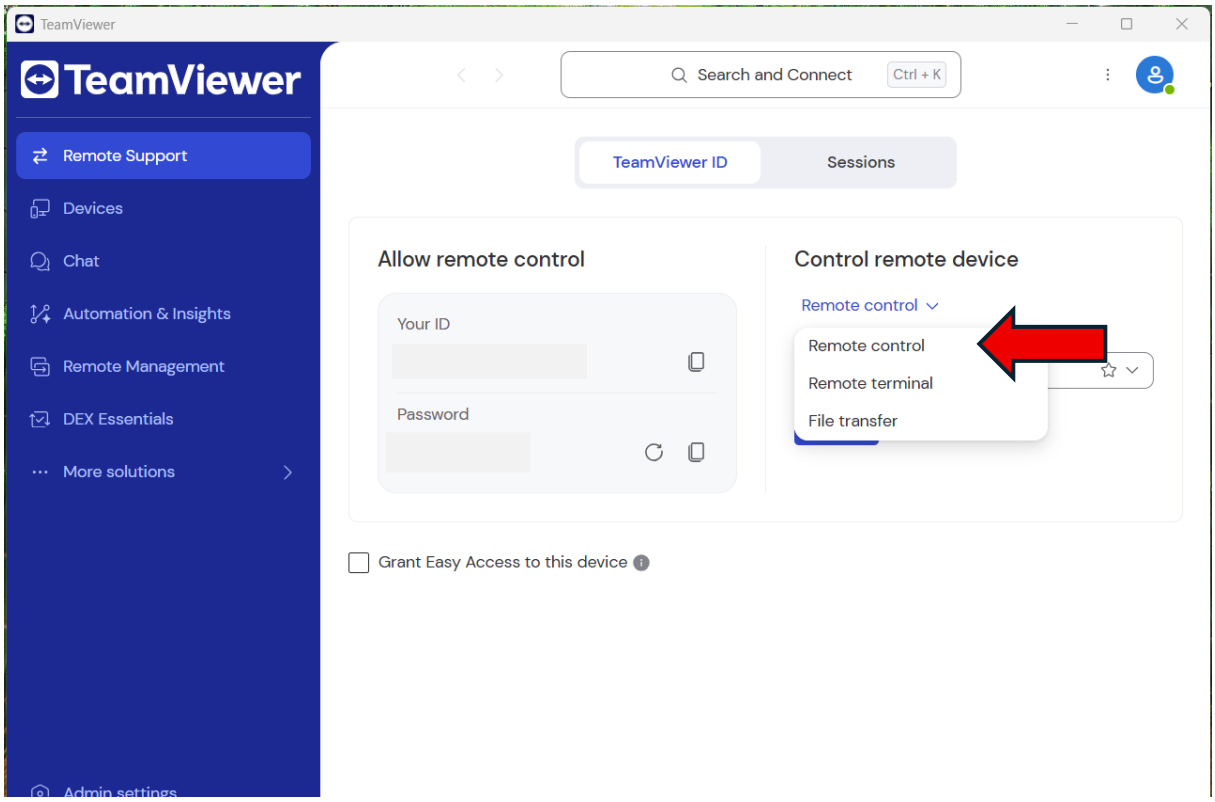
How to Connect remotely, Team Viewer to a 7000PRO

Select Team Viewer from taskbar, if you do not have it set up then ask your IT guys to organise it.

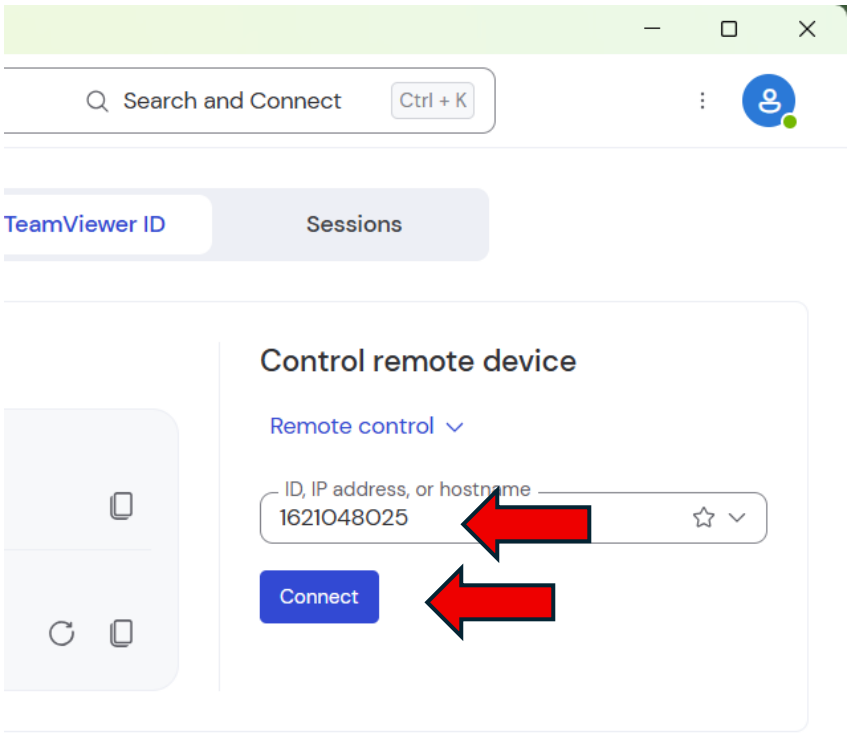
Once the program has come up select the type of connection you require



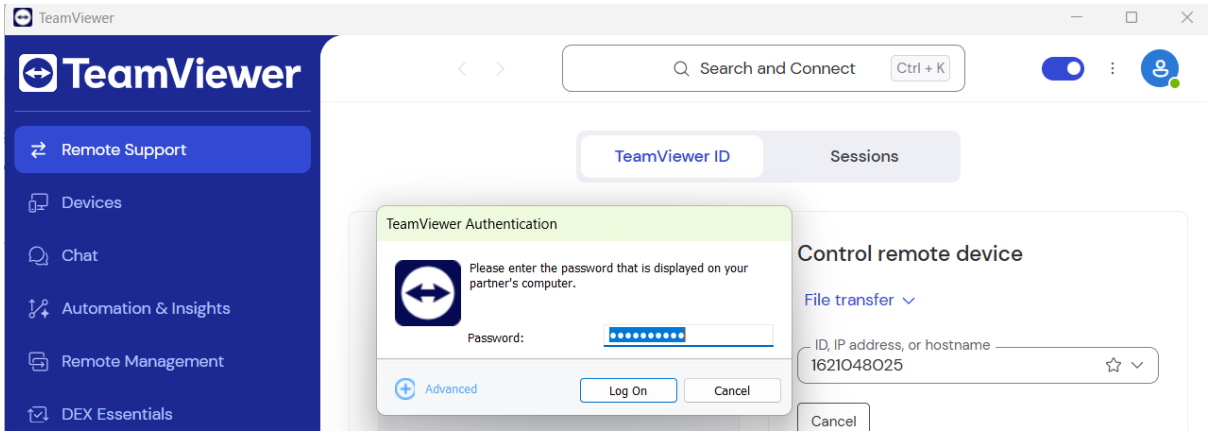
Remote control – Gives you access to the 7000PRO display – Mostly used for support

File Transfer – allows you to transfer files to and from the 7000PRO display

Type in the ID number given to you from the operator of the 7000PRO display



Now select connect

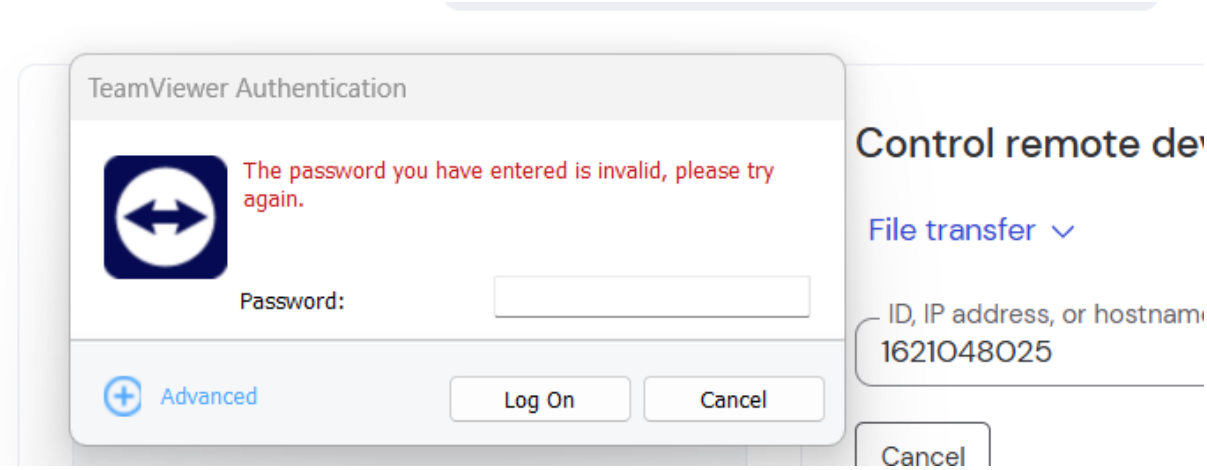


You will be asked for a password, type in **LetMeInNow#7** and select Log On.

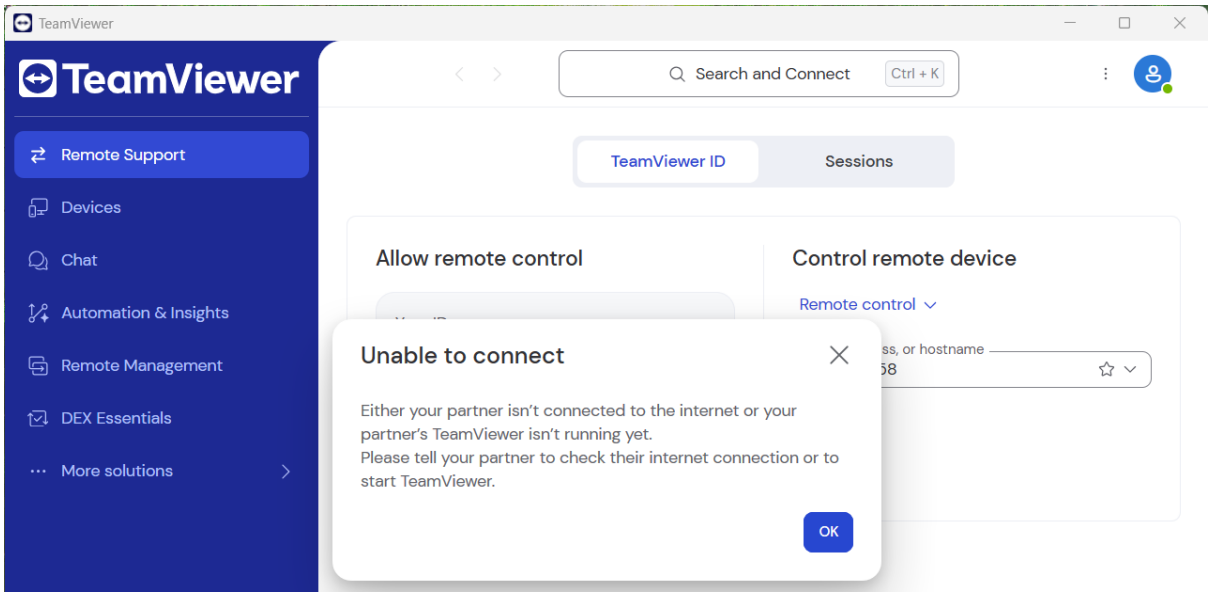
If the logon is successful, then the 7000PRO display will come up on your screen. You will need the operator to select Toggle Cursor for you to have complete control of display.

If you have not put in the correct password the following screen will be displayed.

Type in **LetMeInNow#7,** please note capital letter as the start of each word.



If the password is correct, but you do not connect the following will be shown.



This means that either the ID number is incorrect or the operator has not setup the 7000PRO display with the WIFI. Confirm the ID number and that his phone is connected to the 7000PRO Wi-Fi.
